Greater Noida Institute of Technology (B.Tech in Computer Science and Engineering).

Projects

1. Automated Refunds

Environment   :   Zend(PHP) backend, jQuery as frontend

Role   :   Full Stack Developer

Description

- Centralized refunds over different platforms and created APIs for the same.
- Entire refund journey is now automated including calculations and mode of refund.
- This decreased refund resolution time and reduced refund inconsistencies significantly.

2.One Day Delivery

Environment   :   Zend(PHP) backend, jQuery as frontend

Role   :   Backend Developer

Description

- Filtered orders based on location, warehouse availability and other parameters.
- Reduced order state transitions for faster process.
- Increased coordination with couriers to make faster deliveries.

3.CRM Panel

Environment   :   Yii(PHP) backend, backbone.js as frontend

Role   :   Developer

Description

- Provided CRM panel to the content uploading team.
- Centralized data helped in easy search, retrieval and reuse of a product.
- Reduced data redundancy and ease the content verification process.
